

# Information Sheet

## Failing Model DMX Mud Rotary Drill Rig

The Vendor describes this rig as being in good working order and well maintained. It has a 60,000lb gross load mast, air clutches/double drum draw works complete with 2 x 25 ton Failing travelling blocks and BJ hook, Martin Decker weight indicator, 3-3/8" x 20ft fluted Kelly, cylinder feed pull down and an on-board 5"x8" duplex mud pump. The mast racks in 9m (30ft) joints complete with fall safe rope to top of mast and raking board and is set up with counter weights for rotary tongs. Rig is air start and explosion proof, powered by the Detroit 6V-71 truck engine. The International truck is left hand drive and drives well; but not road registered. Weight 18 tonne.
